Introduction

In recent years, design-based and design-driven research has given rise to several academic initiatives in the field of university pedagogy, especially in the development of doctoral research and specific programmes aimed at design-based and design-driven doctorates.

As teachers and researchers in architecture, we have gradually become part of this discourse in recent years. From our initial contact with the Practice Based Research Programme at RMIT and the corresponding ADAPT-r project at European universities, to Matthias's co-founding of the PEP programme for design-based doctorates at TU Berlin, to our joint participation in the CA²RE conferences and the CA²RE+ programme, we have become part of a discursive space in which the different perspectives and methodologies of “design-based”, “design-led”, “practice-based” research in architecture, design, and art have been in constant productive exchange.

The idea for this publication came about after one of our many conversations about our common areas of interest. It became clear to us early on in our discussion on 7 May 2021 that it might develop into a train of thought we would want to remember, and so we recorded it. In the end, we felt that our conversation touched on intense and previously insufficiently discussed points in the discourse around design-based research, the role of the artefact as a form of knowledge, the differences between design and research practices, and more. And so, on the basis of our transcript, we continued to work on our dialogue; we continued to write in

the form of a written correspondence, clarifying points and adding paragraphs, references, and images. It is precisely because of the dialogical nature of this text that we have decided to open up our conversation to the contributions of a broader group of qualified experts. We have thus developed a dialogical format in which an extended community of colleagues in the fields of architecture, philosophy, and design-based research comment on, critique, and further develop our original exchange.

The result is the following text, which includes comments and references from a variety of contributors in the spirit of our initial discussion – a form of transparent peer review that we hope will contribute both to the methodology of design-based research and to our understanding of design as knowledge practice, expanding this discursive space in many directions. The commentary-based format of the text was inspired by Alex Arteaga's book *Architectures of Embodiment* (2020). Our dialogue constitutes a questioning of scientificity with respect to the artefact; the text is not a conventional scientific work containing all of the relevant references in the field and structured by a linear, clear, logically conclusive argument. On the contrary, through the diversity of positions and dialogical argumentations it contains, it attempts to establish a network of questions that require a positioning capable of changing the focus of the question itself. This aspect becomes clear when we consider the polarisation of the artefact and its dependence on practices that are generated not only by dialogue but also by the positions of the chorus of

commentators, which emphasise perception, a non-anthropocentric vision of the artefact, and the role of apparently artefact-free design practices. In his afterword, Marcelo Stamm describes and categorises the epistemic artefact in more detail – a task that is not addressed explicitly in the dialogue itself. Stamm’s taxonomy, in the form of a family album, remains at the same time open to additions and regroupings.

We would like to express our sincere and deep gratitude to the authors who were willing to invest their time and energy to share their expertise and contribute to this book: Alex Arteaga, Fabrizia Berlingieri, Peter Bertram, Helga Blocksdorf, Anđelka Bnin-Bninski, Marta Fernández Guardado, Anke Haarmann, Joerg Fingerhut, Rolf Hughes, Rachel Hurst, Daniel Norell, Tomas Ooms, Claus Peder Pedersen, Tim Simon-Meyer, and Philip Ursprung. We would also like to thank Rochus Hinkel of AADR for his curiosity and openness to publishing and supporting this experimental format and for our challenging and productive discussions throughout the editing and publishing process. Much of the depth of this discourse is thanks to discussions with our colleagues within the PEP programme and the CA²RE community, for which we are sincerely grateful. For clarifications and stylistic improvements we thank Carolyn Benson, and for translating an experimental text format into an appropriate layout, our thanks go to Stuart Geddes. Last but not least, we thank HafenCity University for the financial support that made this publication possible.

Figure 1.1: “Student Measuring the Temple of Castor and Pollux in Rome”. Henry Parke, 1819. © John Soane Museum.

- 1.1 Tomas Ooms: “I would say the viewpoint is different, more aspective: the archaeologist is measuring the measuring archaeologist – to observe, experiment with, and document methods and means of measuring in order to further the act of measuring and, simultaneously, the method of furthering the measuring of the measuring,” said the artefact.
- 1.2 Joerg Fingerhut: For me, pictures are the *default mode* of design-based research. Drawings, etchings, paintings, etc., provide us with models of the world in a media-specific way, and differently from digital media and architecture itself (Fingerhut 2021). At first sight, it seems as if Parke’s pen and watercolour image shows us the knowledge that can be gained via architectural and technological artefacts (capital, ladder, measuring stick, etc.). Yet the Temple of Castor and Pollux in Rome was not observable to him in his time; rather, it was already one of the most famous ruins of art history (fig. 1.2, three columns on the left). The image is therefore a true epistemic object in that it presents us with the upvaluation of classical antiquity, the measuring of an ideal that is revered and can be brought forth again (this seems quite different from what Matthias sees in it). The measurement is therefore tantamount to a reinvention of the architecture. The main epistemic artefact is the image that brings forth (in a second rebirth after the Renaissance) an architecture that no longer physically exists.

* Measuring a temple *

Matthias Ballestrem (MB): In a lecture, I recently saw an image of a painting showing an archaeology student climbing a very long ladder to measure the capital of a column of an ancient temple (fig. 1.1). It depicts the archaeological practice of producing knowledge about a design product – in this case, an ancient temple. The object of investigation is the temple, the researcher is the archaeologist, the research method is measuring, and the result of the research can be verified by re-measuring and verifying the geometry.

I have been thinking about how this kind of established scientific research might be comparable to design-based research. I use the term *design-based* as a direct translation of the German *entwurfsbasiert*, which on my understanding means that in this kind of research, knowledge production is based on the researcher’s own concrete design. Therefore, both the design-based researcher and the archaeologist share the aim of accessing the knowledge contained in the design results. However, there is of course the difference that architects have created the artefact that the archaeologist is measuring. They have already produced the knowledge that the archaeologist is now translating into numbers and drawings. The form of knowledge here is a special one, however: a capital is, after all, a physically materialised artefact and not a measured drawing.

Lidia Gasperoni (LG): Yes, the comparison makes some differences clear. The first difference concerns the *object of analysis* itself, which in the

Figure 1.2: "View of the Forum Romanum". Giovanni Battista Piranesi, 1748–1766. © Stiftung Preußische Schlösser und Gärten Berlin-Brandenburg.

- 1.3 Anđelka Bnin-Bninski: I find it quite significant that the discussion starts with the notion of measuring. This is exactly the procedure that I introduced in my own doctoral research – on drawing as a critical and tactical activity in architectural design – as an essential leverage that defines the difference between open, active, and engaged drawing, as opposed to the representational, self-referential, non-critical approach to drawing as a design process (fig. 1.3). This shift consists in treating measuring as a bivalent procedure – an exact and scientific, but also experiential, embodied activity, a particular survey (Bnin-Bninski 2018). This relation between the design and measuring is outlined by Paolo Belardi when he elaborates on the Italian terms *disegno* and *rilievo*. While *disegno* stands for both drawing and design, *rilievo* is beyond the *x*, *y*, *z* measurement axes and includes the fourth dimension of time and the fifth dimension of culture (Belardi 2014, 43). Thus, I would say that the activity of the archaeologist is more than a scientific research method; it is also a contextual, experiential, delicate, and even dangerous activity in the specific example of figure 1.1.

Figure 1.3: "The Leverage of Measuring Procedure". Anđelka Bnin-Bninski, 2018.

case of the archaeologist is found, located, and external. In design-based research, the object is instead produced by the researcher him- or herself, who in a second moment establishes a distanced relationship with the object in order to grasp it and make its epistemic value explicit.

The second difference concerns the *methods*, which in the first case seem predetermined and conventional and in the case of design-based research are developed by the researcher, since this research does not yet have a conventional and sedimented methodology, on the one hand, and is a design discipline that shapes space in the process of design itself, on the other.

A third difference concerns the *content* of the research, which in the case of the archaeologist appears to be verifiable in the discipline, whereas in design-based research it must define itself. In particular, the general difference between artefacts, research methods, and content seems to me to be central.

Let me focus on the object of analysis: the artefact in its presence becomes the object of research. It is the epistemic object. It consists in the fullness of the potential perceptions, references, and associations created by its presence. Regarding the question of what kind of knowledge is embedded in the artefact itself, the medium of the exhibition plays a generative role. Jacques Herzog and Pierre de Meuron's cabinet in Basel is a pertinent example. This kind of archive aims to make the work of the office accessible to the public, but it is also an archive of architectural language and its generated spatial knowledge (Ursprung 2005). In interpreting and classifying

- 1.4 Joerg Fingerhut: The drawing archaeologist and the design-based researcher do more, or maybe something completely different. They bring forth meaning in the production of a design.
- 2.1 Tomas Ooms: "I prefer to be contradicted. Or at least contradictable. Does that surprise you? 'Contradictability' is a particular and necessary characteristic of architectural artefacts of inquiry, especially in the context of in practice research (In Practice, n.d.). My 'contradictability' is the capacity (of an architectural document) to be argued and contradicted. For me, this entails that I am perceptive, conceptual, constructive, dialectical, and inventive, but also that I contain the account of my own origin and creation. And further down the process, I am a fragment, a part of a whole. It is then your task to induce, discover, and describe the mereological relationships between the parts themselves and between the part and the whole," the artefact says.
- 2.2 Rolf Hughes: Here, the artefact appears to be removed from its prior context. What is the *context of reception* in which the artefact is now encountered?
- 3.1 Joerg Fingerhut: In the pictorial design, the abundance of meaning contained in its syntactical density is probably one of its foremost properties (Goodman 1976). The endeavour a researcher undertakes in this case seems to be one of guidance or of providing understanding, for example by pointing to parts of the image. The pen and watercolour image presents architectural elements (such as the frieze, dentils and cornice) that had already been destroyed, or at least heavily damaged, in Parke's time. This difference is salient. It causes us to re-orient ourselves towards the image. All research should partially exploit and then re-orient; it is a process that can lead to a practice. With Matthias's pictorial example one could engage in some *ekphrasis* to further explore the model it presents. Other objects may make us re-orient ourselves in more bodily ways, such as when we engage with three-dimensional physical designs or urban settings.

the artefact, archaeologists possess both tacit and explicit knowledge (Polanyi 1966; Schrijver 2021). They can immediately recognise parts of an artefact or a human body and possess a type of knowledge that is not merely instrumental but also embodied. Using specific languages and established methods, the fullness of the archaeologist's experience is reduced by defining its scientific content. The artefact in its presence, however, is there in its fullness, offering a variety of possible experiences. With respect to the artefact, the central questions concern how to make the object explicit without losing or reducing the fullness of its potential experience, in other words, while remaining aware of the different degrees and aims of specific reductions (Hoffmann and Wittmann 2008–2011, Fraser 2014). How are we to make the artefact the source of a research approach that is both communicable and perhaps generalisable – without having to be based on measurable and verifiable techniques? How can the artefact, in its presence, be an epistemic object and generate research practices that aim not to reduce but rather to reveal its epistemic value?

2.1
2.2

MB: The painting shown above illustrates how the capital – an artefact – becomes an epistemic object. It is obviously very fascinating, and thus the archaeologist takes great care, even in dangerous circumstances, to find out more about its qualities by measuring it. Someone, at some point, designed and made this fascinating building element. Someone created this abundance you speak of, which has sparked much research interest. The particular man-made presence of the

3
3.1

4.1 Rolf Hughes: I don't follow the reasoning here. Research practices, on my understanding of (artistic/design-driven) practice-led research, are what drive the research (based on the premise that the researcher can arrive at research insights through the specifics of practice that would not be arrived at by any other means). Documentation and reflection would seem to be concerned with "describing, illustrating", but these are only instances of a wider set of research strategies and practices.

artefact lies at the beginning – before we can talk about the proportion systems of antiquity, after much measuring.

* Research practices redesign the artefact again and again *

LG: An important question from my perspective concerns the role of research practices. Do they merely have the purpose of describing, illustrating? Or are they really what makes the artefact visible? From this perspective, it seems to me that the relationship between artefacts (understood in the broadest sense of the term) and practices is crucial. The mediality of practices is central to design-based research and prevents the reduction of the knowledge content of the artefact to mere linguistic description, allowing for a dimension of meaning exploration in which practices continually redesign the artefact and reveal its epistemic value. This is how research develops out of designing, and it is not just research about the artefact that has already been designed. Don't you think so?

MB: I think so, yes. And I also understand why it's important to your argument that the practices you're concerned with are inventions, in the sense of being new and original. That is, they become design practices because, on your understanding, they are not purely analytical but bring with them an uncertainty and questioning that is inherent to design in order to qualify as design-based research, thereby distinguishing it from the practice of the archaeologist, who draws the capital. This

6.1 Peter Bertram: I think it is important, on a fundamental level, to avoid notions of similarity between artefact and research object. It is really the irreducible difference between the design artefact and the object of research that drives the inquiry of design research (Peirce 1998, 48). The difference is not a gap to be bridged by methodological clarity but rather a productive friction between fundamentally different modes of thinking (Deleuze and Guattari 1996). Design and research practices do not need to be mutually translatable in order for design research to develop. On the contrary, I suggest that a defining characteristic of design research is that it is involved in problem invention across, or perhaps through, the fundamental difference between design and research. Difference is something in itself.

distinguishes designing from design-based research as two independent processes.

LG: This is a fundamental point, i.e. the distinction between artefacts and research, which also depends on specific practices that constitute the methodology through which the artefact becomes an object not only of observation, perception, evaluation, etc., but also of research. 6

6.1 Practices are also not to be confused with design processes. Processes can ultimately say something about artefacts, but in the end the quality of the artefact does not depend on the disclosure of the processes of creation. There are also processes that are total failures, but the artefact is still marked by a certain quality. Practices, however, are the methodological field in which the artefact can become an object of research that is knowledge-generating without becoming purely discursive. The practices are in fact design practices, but they are not just designing objects; they are the crucial path of design-driven research.

* The crucial contribution – is design-based research independent of the artefact? *

MB: The question is, *where* does the decisive contribution emerge? The practices you describe as research practices are used to make accessible what is already present in the artefact, and thus not only to observe the artefact, not only to evaluate it directly, but to question it critically, which in turn contributes to sharpening the 7

NOTES ON CONTRIBUTORS

Alex Arteaga is an artist researcher who combines and hybridises aesthetic, phenomenological, and enactivist research practices through an inquiry into embodiments, environments, and aesthetic cognition. He studied music theory, piano, electronic music, composition, and architecture in Barcelona and Berlin and received a PhD in philosophy at the Humboldt University Berlin. He has been a visiting professor at different universities and educational centres, including the University of the Arts Helsinki and the Berlin University of the Arts, and has developed long-term artistic research projects such as *Architecture of Embodiment* (www.architecture-embodiment.org) and *Contingent Agencies* (www.contingentagencies.net).

Matthias Ballestrem is an architect and a professor of architecture and experimental design at Hafencity University in Hamburg. He has taught architectural design at various institutions, including Cornell University, the CIEE GAD Berlin programme, and TU Berlin as a visiting professor of building design and construction. In 2011, he was a scholar at the German Academy Villa Massimo in Rome. He is a co-founder of the “Programm Entwurfsbasierte Promotion” (PEP, or the Programme for Design-Based Doctorates) and an active member of the European CA²RE network on design-driven doctoral research, a member of the Research Academy of the EAAE, and a member of the Interdisciplinary Forum Neurourbanism. His main research interests include “design-based research”, experimental design, spatial perception, spatial complexity and the architectural typologies of interiors.

Fabrizia Berlingieri. Architect and post-doc researcher, Fabrizia Berlingieri is an associate professor of architecture and urban design at the Department of Architecture and Urban Studies (Politecnico di Milano) and a visiting researcher at the Department of Architecture (TU Delft). She studied and researched at the University of Reggio Calabria, Universidade Técnica de Lisboa, Accademia di Architettura di Mendrisio, Bauhaus Stiftung Dessau, and TU Delft. Her main research projects currently under development include *Minor Architecture for Marginal and Fragile Territories* (2019/2022), *Design Processes for Urban Transitions* (2019/2022), *Ways of Knowing in Architectural Praxis: Images, Analogy, Metaphors and Masks* (2020), and *Urban Architectures* (2022).

Peter Bertram is an architect, researcher, and educator employed as an associate professor at the Royal Danish Academy in Copenhagen, Denmark. He is head of the master’s programme in art and architecture and head of the organising committee of the artistic research biennial Works+Words in Copenhagen. He has exhibited his

work on many occasions in Denmark and internationally. He has published several books on his work, including *The Makings of an Architectural Model* (2012), *Academic Dissensus* (2016), and *Problem Invention* (2019).

Helga Blocksdorf is a freelance architect who runs the architecture office Helga Blocksdorf / Architektur in Berlin, established in 2013. The firm's projects include the Erlebnisportal Weimar, the conversion of a barn in Rieckshof, and the Rosé Atelier House, all internationally recognised, award-winning, and featured in many publications. The core idea behind her projects is the architectural quality generated by sophisticated and sustainable concepts in design and construction. In 2021, she was appointed as professor and head of the Institute for Construction at the TU Braunschweig. Prior to this, she was a guest professor of constructive design at the Bauhaus-Universität Weimar and worked as a research assistant in the team headed by Prof. Ute Frank at the TU Berlin from 2007 to 2012. In 2019, she was accepted into the "Programm Entwurfsbasierte Promotion" (PEP, or the Programme for Design-Based Doctorates) as a doctoral candidate. Between 2001 and 2013, she was part of the artist collective *après-nous*, which held international exhibitions and installations in cities such as New York, Berlin, and Copenhagen. After graduating from the UdK Berlin, Helga Blocksdorf gained experience in construction management, execution planning, and competitions at Staab Architekten, Berlin.

Anđelka Bnin-Bninski is an architect engineer who specialises in the theory of arts and media (University of Arts, Belgrade) and architectural philosophy (ENSA Paris-La Villette, Paris). She works as an educator, curator, and interdisciplinary researcher affiliated with the University of Belgrade, Faculty of Architecture, and associated with the Grephau laboratory in Paris. She has experience as a practicing architect, has collaborated with members of the independent artistic scene in Belgrade, and is engaged in multiple international trans-disciplinary design-driven projects and initiatives. Her current investigations are focused on critical strategies and activist tactics in drawing research in architectural practice. She is a representative of the ARENA architectural research network, a member of the advisory board of the CA²RE+ project, and a partner of the RAPS project.

Marta Fernández Guardado is a Spanish architectural designer, researcher, and educator based in Berlin. For seven years, she worked as a project architect at June14 Meyer-Grohbrügge & Chermayeff and Sam Chermayeff Office, developing furniture, interiors, and buildings, such as the housing building Kurfürstenstraße 142 in Berlin. She has taught at Dessau, ETH Zürich, and the TU Berlin, where she currently

works as a lecturer and researcher. Since 2019, Marta has been a doctoral candidate at the HafenCity University Hamburg and a participant in the “Programm Entwurfsbasierte Promotion” (PEP, or the Programme for Design-Based Doctorates) at the TU Berlin, where she has been conducting her design-based research “Home, Things, Bodies”, a thing-based exploration of personal space and the core of her independent current practice.

Joerg Fingerhut is an empirically engaged philosopher of mind and art working at the Berlin School of Mind and Brain (Humboldt-Universität zu Berlin). In his projects he theoretically and experimentally explores the impact of cultural artefacts (pictures, film, architecture) and urban design on the brain-body nexus and the mind. He is the scientific co-coordinator of the EU-H2020 Consortium Project ARTIS (Art and Research on Transformations of Individuals and Societies) and the head of the research group “Neurourbanism” at the Charité University Medicine. He was a deputy professor of philosophy of mind at LMU Munich, a member of the “Functions of Consciousness” research group at the Berlin-Brandenburg Academy of the Sciences and Humanities, and an “Art & Neuroscience Postdoctoral Fellow” at Columbia University, New York.

Lidia Gasperoni is a research and teaching associate at the Department of Architectural Theory of the Institute of Architecture at the Technical University Berlin. She studied philosophy in Rome, Freiburg, Breisgau, and Berlin. She obtained her PhD from the TU Berlin and an associate professor habilitation in Italy in the field of philosophy. She teaches architectural theory and philosophy with a focus on media philosophy, Anthropocene theories, and aesthetics at the TU Berlin and previously at the UdK Berlin and the University of Kassel. Her publications include: *Versinnlichung* (De Gruyter, 2016); *Media Agency*, with Christophe Barlieb (transcript, 2020); *Artefakte des Entwerfens*, with Anna Hougaard et al. (TU Verlag, 2020); *Site of Coexistence* (IQD, 2021); and *Construction and Design Manual: Experimental Diagrams*, DOM publishers 2022.

Anke Haarmann (philosopher, artist, and design theoretician) earned her doctorate in philosophy at the University of Potsdam, founded the Centre for Design Research, a platform for practice-based design research and critical theory at the University of Applied Sciences in Hamburg, and currently co-heads the German Society for Artistic Research and directs the PhDArts programme at the University of Leiden as Professor of Practice and Theory of Research in the Visual Arts.

Rolf Hughes is a professor of the epistemology of design-led research at the Department of Architecture, KU Leuven, and artistic director

of the Experimental Architecture Group, which develops pioneering transdisciplinary research, design prototypes, and immersive experiences for the emerging ecological era. His artistic research explores “unspeakable dialogues” between practices of knowing, involving epistemic actions, artefacts, and performances alongside nonhuman agencies. A writer across multiple genres, his work has appeared in *The Handbook of the Unknowable* (2016), *Star Ark: A Living, Self-sustaining Spaceship* (2016), *Soft Living Architecture: An Alternative View of Bio-informed Design Practice* (2018), *Liquid Life: On Nonlinear Materiality* (2019), *Experimental Architecture: Designing the Unknown* (2019), and *The Art of Experiment: Post-pandemic Knowledge Practices for 21st Century Architecture and Design* (co-authored with Rachel Armstrong, 2021), as well as at biennales and venues such as the Palais de Tokyo (Paris), the Max Planck Institute (Florence), and globally via Digital Futures.

Rachel Hurst is a senior adjunct research fellow in architecture at the University of South Australia, following an extensive career there as a senior lecturer and design stream coordinator. Recipient of numerous national teaching awards, her research has championed practice-based and creative research outputs, based in theories of the everyday, design pedagogy, analogue practices, and Australian modernism. She has an extensive publication and exhibition background. Her PhD by practice at RMIT (2016), “The Gentle Hand and the Greedy Eye: An Everyday Baroque Practice in Architecture”, was awarded three national awards for art book publishing. In 2019, Hurst was made a fellow of the Australian Institute of Architects and in 2021 received their President’s Medal for her contributions to the profession.

Daniel Norell is a cofounder of the Stockholm-based architecture practice Norell/Rodhe and a senior lecturer at Chalmers University of Technology in Gothenburg. Norell/Rodhe’s work ranges from cultural buildings and landscapes to interiors and installations. Recently completed projects include a conversion of a historical navy building for the Royal Institute of Art on the island of Skeppsholmen in Stockholm, a project that was shortlisted for the Young Swedish Architecture Award. Norell/Rodhe have presented their work in lectures, periodicals, and exhibitions at ArkDes, Bildmuseet, the Oslo Architecture Triennale, the Venice Architecture Biennale, and the Yale University School of Architecture. Daniel holds master’s degrees in architecture from the University of California Los Angeles (UCLA) and from the KTH in Stockholm and is currently completing a PhD at Chalmers.

Tomas Ooms studied architecture, literature, and research methods. He is a founding partner of STUDIO TUIN en WERELD, a design practice research studio based in Antwerp (Belgium). He is an

academic promotor of the Master Dissertation Design Studio at the Faculty of Architecture at the KU Leuven. His PhD research “Between: Yard and World: to Draw a Distinction: on the Form of Re-Entry: A Practice Between: Yard and World” is a practice-based architectural inquiry into space as relationships. He is a member of the Architecture In Practice research group. In addition to being a practising architect, he is a composer and performing musician.

Claus Peder Pedersen is professor MSO in research by design and head of the PhD School at the Aarhus School of Architecture. He is active in promoting and establishing design-driven and practice-embedded research through *Advancing Supervision for Artistic Research Doctorates*, *CA²RE+*, *Collective Evaluation of Design Driven Doctoral Training* and, previously, the Marie Curie-funded ITN ADAPT-r *Architecture, Design and Art Practice Training-research*. His research is centred on relations between representation, geometry, and architecture, with a focus on digital tools. He pursues these interests through academic and design-based research.

Tim Simon-Meyer is an architect, lecturer, and researcher based in Schleswig-Holstein, Germany. He has a particular interest in the relation between structural expression in architecture and its potential for affordances and appropriation in use. He studied at the UdK Berlin and the UAL Lisboa and gained practical experience at Pezo von Ellrichshausen in Concepción, Chile, and Max Dudler in Berlin, Germany. From 2015 to 2017, he taught at the TU Munich, and since 2017 at the HCU Hamburg, where he is also working on his doctorate, “The Potential of a Tectonic Approach for the Experiential Qualities of Architecture”. Together with the Portuguese architect Joao Quintela, he founded the architectural office Atelier JQTS.

Marcelo Stamm is a professor of philosophy and creativity at Virginia Tech University (US) and has extensive experience in continental philosophy and the philosophy of mind and language. His particular focus is the philosophical appraisal of creative practice research. Stamm studied in Munich and Oxford and worked in Germany and Australia prior to his appointment in the US. Outside of Germany, he served as head of the School of Philosophy at UTAS, as research director at the Australian Innovation Research Centre, and as deputy dean for research and innovation at the Royal Melbourne Institute of Technology RMIT. His research on innovative models of conceptualising creative processes across all areas of art and design, but also within philosophy using constellation research, has been supported by numerous fellowships and research grants.

Philip Ursprung is a professor of the history of art and architecture at ETH Zurich. He served as dean of the Department of Architecture

from 2017 to 2019. He has taught at the Universität der Künste Berlin, Columbia University, Cornell University, and the University of Zurich. He is editor of *Herzog & de Meuron: Natural History* (Montréal, 2002) and *Caruso St John: Almost Everything* (Barcelona, 2009) and author of *Die Kunst der Gegenwart* (Munich, 2010), *Allan Kaprow, Robert Rauschenberg, and the Limits to Art* (Berkeley, 2013), *Brechas y conexiones: Ensayos sobre arquitectura, arte y economía* (Barcelona, 2016), *Der Wert der Oberfläche* (Zurich, 2017), *Representation of Labor / Performative Historiography* (Santiago de Chile, 2018), and *Joseph Beuys: Kunst Kapital Revolution* (Munich, 2021).

Architectural artefacts are negotiated as epistemic objects, an autonomous and innovative form of knowledge capable of inaugurating and institutionalising architectural research. The backbone of this publication is a dialogue between the architect Matthias Ballestrem and the philosopher and architectural theorist Lidia Gasperoni. In a vibrant discussion, they consider the epistemic value of the architectural artefact, the role of research practices in making this knowledge explicit and accessible, and the criteria for qualifying as design-based research. Alex Arteaga, Fabrizia Berlingieri, Peter Bertram, Helga Blocksdorf, Anđelka Bnin-Bninski, Marta Fernández Guardado, Joerg Fingerhut, Anke Haarmann, Rolf Hughes, Rachel Hurst, Daniel Norell, Tomas Ooms, Claus Peder Pedersen, Tim Simon-Meyer, and Philip Ursprung have added short comments and images to enrich the arguments with criticism, extensions, associations, and references. An afterword by Marcelo Stamm provides a theoretical reflection on a possible taxonomy of epistemic artefacts.
